PRECISION DELIVERY SYSTEM

FOR USE WITH DOXEM PRECISE

The Precision Delivery System (PDS) is a hand-held microduster, designed to deliver small, precise amounts of dry flowable formulations into voids, cracks, and crevices. It allows PMPs to work quickly, accurately and precisely in their dry flowable bait applications.

The Precision Delivery System Advantage

- Revolutionary, dry flowable applicator.
- Efficient, low-waste delivery system.
- Includes an on/off switch to prevent misfiring.
- Provides clean and precise dry flowable applications.
- Optimized consistency & handling - performance you can rely on.
- Unique equipment - helps bait penetrate deep into voids, cracks, and crevices.
- For use with CSI flowables only.

Packaging

The Precision Delivery System (PDS) will be available to purchase with a starter kit or individually.

Frequently Asked Questions

What is the Precision Delivery System?

The Precision Delivery System (PDS) is a brand new, innovative, hand-held microduster, designed to deliver precise amounts of dry flowable formulation into voids, cracks, and crevices. It allows PMPs to work quickly, accurately and precisely in their dry flowable bait applications potentially saving money and labor cost that effect the bottom line.

Can I use other products in my PDS such as dusts?

No. Use of other products in the PDS will cause the unit to clog and stop functioning. Do not use insecticides other than Doxem® Precise in the PDS.

Does the PDS always deliver Doxem® Precise consistently?

The PDS will deliver bait very consistently until the cartridge is almost empty. When the container nears empty, output may decrease depending upon many factors. When this occurs, simply use a new/full cartridge and recover any leftover bait into the new cartridge.

Is the PDS metered/automatic?

No. The PDS puts out bait based on how long the trigger is actuated by a technician. See Doxem Precise chart.

What type of battery does the PDS use? How do I change it?

The PDS uses a standard 9V battery. Please refer to our startup guide and/or instructional video (in business resources) on how to change the battery for more information.

Should I remove the cartridge from the PDS when I am finished using it for the day?

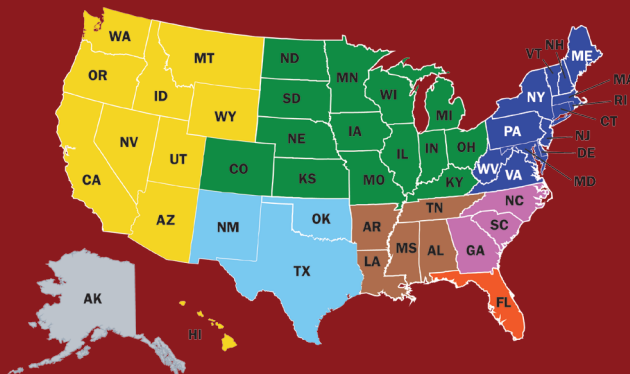

Yes. If you are finished using the PDS for the day, remove the cartridge and store it in the provided pouch.

Can the PDS be used while upside-down?

No. The PDS is, essentially, a duster, and like most dusters it does not function properly when actuated in the upside-down position.

What if my PDS doesn't work?

Visit <https://csi-pds.com/contact-csi> and we will be in touch shortly.
